

EAS Alarm™
Tracking & Reporting
—YpadEAS.com—

Many EAS systems are not reaching their full protective potential.

Many times tagged product is taken through the system setting off the alarm only to be ignored. This creates a lack of trust in the system and gives the potential shoplifter an opportunity to steal valuable product.

yPad™, with optional scanner quickly collects data and captures SKU of item(s) which is instantly sent to corporate.

yPad™ utilizes today's technology to control and capture all alarm and customer traffic data. Regardless of the type of EAS system, the yPad™ can control sound and lighted alarms, read customer traffic data and store them for retrieval at any time or automatically capture and send this data in varying formats such as ASCII, CSV, MDB and other specified formats, to your server.

- yPad™ adds TEETH to your EAS systems by requiring personnel to respond to each alarm event.
- Identifies a reason for EACH alarm.
- Immediately gives feedback about alarms type, reason for alarm and personnel responding to alarm.
- Gives each store the ROI information needed to understand how EAS has prevented shrink.
- Quick scanner input of SKU item.
- Works with ANY EAS system..
- Monitors Fitting Room Protection System
- Interfaces to most CCTV systems providing event information and marking.
- Unlimited Security and Reason Codes
- Can monitor up to 16 antennas at one entrance/exit.

Never before have you been able to monitor, analyze and have the knowledge needed to attack your store's shoplifting issues.

yPad™ can not only elevate your EAS security but can also collect valuable data to help your stores. Information such as customer traffic, false alarms, etc., help with staffing, sale dates and times and EAS service issues.
